

Zeolite Benefits

Zeolite is a Natural Detox - With No Side Effects!

What is a Zeolite

Zeolites are natural volcanic minerals that are mined in certain parts of the world. When volcanoes erupt, molten lava and thick ash pour out. Because many volcanoes are located on an island or near an ocean, this lava and ash often flows into the sea.

Thanks to a chemical reaction between the ash from the volcano and the salt from the sea, amazing minerals like zeolites are formed in the hardened lava over the course of thousands of years. What makes zeolites so amazing is the fact that it's not only one of the few negatively-charged minerals found in nature, but it also has a very unique structure. Zeolites have large, vacant spaces--or cages--that allow space for large, positively charged ions to be attracted to it, then trapped and eliminated from the body.

What Makes Zeolite So Valuable?

The silicon building block in Zeolite is electrically neutral, but the aluminum building block carries a negative charge, which creates charged sites throughout the entire crystal structure.

A three-dimensional framework produces net negative charge that traps environmental pollutants and is balanced by the exchangeable cations Calcium, Magnesium, Phosphate.

The clinoptilolite attracts positive minerals such as calcium, magnesium, potassium, sodium and iron. These common positive cations then are displaced by heavy metals such as cadmium, mercury, nickel, and arsenic and removed safely from the body.

Smaller Ions such as Mercury and Cadmium are pulled deeply into the cage of the zeolite and held securely for safe elimination.

- Allows for *selective* chelation: Hg > Pb > Sn > Cd > As > Al > Sb > Fe > Ni verified by Atomic Absorption Spectroscopy
- Clinical Studies in "normal" volunteers: 5-7 fold increase urinary excretion within 1 week
- Clinical Studies in coal miners: 12-15 fold increases in urinary excretion & decreases in hair levels of toxic metals

Top 5 Zeolite Benefits:

1. 100% safe and non-toxic at any level: All traces of the mineral are completely eliminated out of the body within 6 to 8 hours. It's safe for children, pets, pregnant women and nursing mothers. It is also safe to take with most medications (as long as they are not heavy metal based), but as always you should check with a medical professional first. *

2. Removes heavy metals & toxins: Micronized zeolite has the perfect molecular structure for capturing and removing heavy metals from the body without removing healthy ions and minerals. (as explained in diagram above). Many people report feeling increased energy, clarity and vitality after removing heavy metal build-up. *

3. Helps balance body's pH levels to a healthy alkalinity: Whenever micronized zeolite is introduced to the body, it buffers the system towards slightly alkaline (pH 7.35 to 7.45), which is a optimum pH for the human body. Zeolite attracts and then buffers excess protons which cause acidity and in this way can help many conditions from acid reflux to Candida and arthritis.

4. May help reduce cancer risk: There is clear evidence that micronized zeolite not only removes toxins that can cause cancer (75% or more of cancers may be

toxin-related). This does not mean that zeolite is a cancer treatment, it is a useful supplement to integrate into a treatment program.*

5. Zeolite is very easy to take: Most detoxification products are difficult to take and many must be injected into the blood or administered such as an enema. **Zeolite** works at the cellular level, has no taste or odor and it can be taken on an empty stomach. (you wont even know you are taking it)

Questions about Zeolite...

How long will it be before I see results?

This is difficult question to answer and all depends on the individual person. Everyone shows toxicity in their body in different ways. Some may have bad skin, some may show severe medical issues. Based on the persons exposure to toxins and heavy metals, there are different levels in people. People also respond differently to treatment. Our general recommendation is to take the product for 90 days and then be reevaluated by your medical professional to see what progress has been made. Please make sure that you are also taking the recommended dosage based on your needs to ensure that you are receiving the optimum benefit from the product. *

I have had problems with side effects of other detoxifying products, will I have the same problem with your products?

Toxicity in the body can show itself in different ways in different people. Most detoxifying products have side effects but our Zeolite products generally do not have any side effects. Other detoxifying products pull heavy metals and toxins out of the tissue and flood the bloodstream with these toxins. Your body is then overwhelmed by being hit with all of these toxins at once, which is what cause all the unpleasant side effects. With Zeolite, when the toxins and heavy metals are pulled out of the tissue, they are trapped in the zeolite cage and your body is not re-exposed to them, thereby reducing the possibility of any negative side effects. Although possible reactions may differ by individual.

Why don't you manufacture a liquid Zeolite?

The simple answer is because there is no such thing. It is a marketing ploy made up by a MultiLevel Marketing company who manipulated information about a patent from an inventor who never claimed it was Zeolite any longer after creating it. He destroyed the beneficial cage structure and negative charge by liquefying it with hydrochloric acid. He was trying to create an injectable drug and never even claimed it was ingestible.

All published scientific studies ever done on Zeolite showing it beneficial, were done on the powdered mineral. There was one study quoted on the internet by the MLM company's distributors and we later proved that it was a lie made up to sell product by them.. The company that they claimed did the study, was actually the person that they originally licensed the patent from who later told the truth that the study never existed after the MLM company stopped paying the licensing fees to them.
